INDEX. Both use the proven performance of Garmin GPS and fullfeatured mapping to create an  
unsurpassed portable GPS receiver. Take a moment to compare the contents of this package with  
the packing list on the box. Hi, I just find out, on Garmin website [www.garmin.com](http://www.garmin.com), for both 60csx  
and 76csx, under specification seciton, it stated asGPS accuracy. Position. I live in the US and I use  
meters on my gps. I dont trust the stanard units. Lets say your standing in a field. With standard  
units it may say 16 feet, but in metric it will say 34 meters. When hunting a cache I like to know  
about where I am instead of trying to pace it out and I find that Im usually WITHIN a certain number  
of meters rather than an exact distance in feet away. If you took a tape measure to a cache site youll  
find that knowing the number of feet is useless because its almost always wrong.Robert.

Hi, I just find out, on Garmin website [www.garmin.com](http://www.garmin.com), for both 60csx and 76csx, under  
specification seciton, it stated asGPS accuracy. Position. Product Information. Never get lost on a  
fishing trip again with the Garmin GPSMAP 76Cx at hand. This petite GPS device is waterproof and  
has a bright, clear, color screen that is readable even out on the water. You can also use this on land  
for camping and hiking trips. An included 128MB microSD card allows you to store optional map  
information. A variety of alarms help you steer clear of a variety of hazards, including the anchor  
alarm, offcourse, arrival, clock, proximity, and shallow hazard alarm. A 38second acquisition time  
means you wont be standing around forever waiting to find out where you are and a 1 per second  
update rate keeps up with you on the go. Wonderful device for marine and outdoor  
adventures.Perhaps, my review about GARMIN 76Cx will be no competent and even would laugh  
someone, but I try.I bought this product consciously, knowing the technical characteristics and  
scope. Excellent GPS for the outdoorsman, boater, etcHad a old Garmin 12 Version 1.0 loved the  
simple way it operated but it was having trouble picking up signals and no longer dependable. I like  
this unit as it only take two batteries, has clear colors, zoom in and out easily, quickly can name  
waypoints and the PC connectivity. I do not like the map that came with it and use this item in the  
Louisiana Basin I downloaded a free topo but it is still not of very good quality I do not like the many  
screen functions as I basically use track on and off and waypoints to locate hunting stands and  
underwater nets. This unit acquires the signal quickly and preforms well. INTRODUCTION. Thank  
you for choosing the Garmin GPSMAP 76Cx. 2010. U.S. Fish and Wildlife Service. National  
Conservation Training Center. Model Overview and Data Collection Procedures. 1. Garmin GPSMap  
76CSx.INTRODUCTION. Thank you for choosing the Garmin GPSMAP 76CSx.

Plus, you get a bright, sunlightreadable color TFT display and an included a 128 MB microSD card for storage of optional map detail. Add all that to the 76CSxs integrated barometric altimeter and electronic compass, and youve got a highly capable unit. Simply put, the 76CSx is ready to take you anywhere on the water. Landlubbers will find much to like about this unit, too, as it packs great GPS mapping capabilities into a compact device. The 76CSx features a removable microSD card for detailed mapping memory and a waterproof, rugged housing. View larger. The GPSMap 76CSx features the powerful SiRF GPS navigation chip, as well as an electronic compass and a barometric altimeter. The trip computer provides odometer, stopped time, moving average, overall average, total time, max speed, and more. You can use the 76CSxs memory card slot with preprogrammed microSD cards from Garmin sold separately that provide topographic maps, city streets, and nautical charts. In fact, the unit is compatible with most Garmin MapSource products, including BlueChart, City Navigator, U.S. Topo 24K, and U.S.

<https://airframecreative.com/images/boss-505-manual.pdf>

Topo and Recreational Lakes with Fishing Hot Spots. The unit comes preloaded with an Americas autoroute basemap that provides automatic routing capabilities including highways, exits, and tide data. There's also a preloaded marine point database. You can even get turnbyturn directions when you're driving, and an integrated trip computer provides odometer, stopped time, moving average, overall average, total time, max speed, and more. The 76CSxs 2.6inch, 256color TFT color display is designed to present mapping and trip information clearly and accurately in any lighting conditions. Plus, the case is lightweight, rugged, and water resistant to IEC 60529 IPX7 standards can be submerged in one meter of water for 30 minutes. Marine users will also like the fact that the 76CSx floats. When using two AA alkaline batteries, you'll get up to 20 hours of battery life from the unit. Another key feature of the 76CSx is the 10,000 point automatic track log; 20 saved tracks 500 points each let you retrace your path in both directions. Meanwhile, there's a large numbers option for easy viewing, as well as a dualposition display mode. The unit also includes builtin celestial tables for best times to fish and hunt, plus sun and moon calculations. You also get audible alarms for anchor drag, arrival, offcourse, proximity waypoint, and clock. Meanwhile, the electronic compass allows you to get accurate headings while standing still. The 76CSxs trip computer provides odometer, stopped time, moving average, overall average, total time, max speed, and more. Meanwhile, a fast processor allows the 60Cx to provide quick autorouting, turnbyturn directions, and audio alerts when you use the optional MapSource software, which can be stored on the units included 128 MB microSD card. Downloading information is quick with the USB or serial port interfaces. Using the dedicated serial port, the 76CSx can share navigation instructions with repeaters, plotters, and autopilots.

If you like the features of the 76CSx but don't need an electronic compass and a barometric altimeter, check out the Garmin GPSMap 76Cx. To calculate the overall star rating and percentage

breakdown by star, we don't use a simple average. Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Sam B 5.0 out of 5 stars I was slightly apprehensive before the purchase about the screen size and level of detail on the maps, but after a little getting used to, I was really VERY impressed. Having been used to large paper charts expensive this is a great deal. The rocks and shallow areas are clearly marked, dropping anchor is make easy in places one have never been to before. Its really cost effective as the paper charts to cover the area would have been easily the double the cost, and finally the ease of use makes the old charts nearly obsolete. I still would keep some trace on paper in theory, but by the end of the 23 weeks sailing, I was quite happy with just the hand held GPS as sole mapping and positioning. So maybe a 2nd GPS as a back up would be wise !! I also have the city navigator USA, and it works well in a car, complete with warnings as to the next turning etc. The only bit I am unhappy with Garmin, is that you cant transfer the software from one GPS to another, so if you loose the GPS, tough, you loose all the software as well. Unfair in my view.It acquired the satellite signals quickly and never lost them, even in very deep woods; the screen was bright and detailed; the trip odometer and altimeter were amazingly accurate; and after hours of hiking the batteries Energizer rechargables were still going strong. I will add that I purchased a MicroSD card of the Upper Midwest and we were quite pleased at the amount of detail it shows.

I would highly recommend going this route versus buying blank SD cards and going through the hassle of downloading topo maps. It may cost a bit more, but all things considered it is the most practical way to go. The ONLY downside is the size; I wish it were as small as the Vista or the newer Colorado.It is missing some of the high end tricks that my GPSMAP 276C has but it is much less bulky and seems to track satellites better with the new SiRF GPS chip. I use the handheld GPS mostly for flying on my hang glider, to record my flights and arrange for pickups with I go cross country and land out along a road. It is easy to follow your position and use tracks to see where you have been. Garmin is the gold standard for GPS among the flying crowd and we use them for flight tracking and scoring during national competitions. It is reliable, easy to use and read and the buttons are big enough to use with your flying gloves on. I also use this for hiking with TOPO maps loaded. It has never let me down but take extra batteries!The single point location accuracy is less than 20 ft. But it averages for better accuracy. Rain, sun, snow, temperatures as high as 95 F and as low as 40 F and never an issue. It has been discontinued for several years, but I successfully found a used one in good condition for myself. Excited to get it.I had been using a Garmin 72 and the change to the 76CSx has been pure joy. I debated between the Garmin 60CSx and the 76CSx and finally chose the 76 because the keys are the same and I felt as is if would be easy to adapt to. The only advantage that I could see that the 60 had was the smaller size. I also ordered the City Navigator disk which I had trouble loading. Once I got it loaded it was wonderful. I bought a 1 GB micro card and had even more trouble loading the maps on that, but I went to the help site and used the mass storage device instructions and loaded the 9 states including Texas I needed for vacation onto the unit.

It was an amazing help on the trip. I couldnt be happier with the unit. I use it when I travel and when I take walks it keeps track of distance and speed for me. It works even in my house, when I have it shut up in my purse and under the heaviest of tree cover. I could go on and on, but let it suffice to say, I am very happy with it.He uses it for hunting. He loves it. Probably would of gotten lost a few times without it. My husband is not tech savvy and yet learned to use this to his needs. He had also used it as a speedometer. Pretty handy tool.Sorry, we failed to record your vote. Please try again.
