Write a review on ProductReview.com.au ! Rob H Brisbane 4 reviews 1 like For accuracy thats good enough for me. Its convenient, and Ive been surprised to find its quick enough that its generally possible to get a reproducible reading despite kids not sitting still especially when sick. The replacement plastic ear covers are expensive but I dont use a new one for each reading, just a different one for each person and dispose of them after a given bout of sickness.

So its not too bad. 1 like Share More Similar opinion. Write a review on ProductReview.com.au ! Find out how Braun ThermoScan IRT 6020 compares to other Baby Thermometers Know better, choose better. Compare all danielp Melbourne 13 reviews 5 likes Ive found that when the kids are very small its difficult to get a consistent reading and found myself going back to the old thermometer, but once they are about 3 a bit bigger it seems to get a consistent reading. Must be to do with the positioning and size of ear, even once bigger i found myself having to be concious of exactly how i position the thermometer in the childs ear as getting the position wrong can mess with the reading. Saying that once this is worked out its quite quick They type is 6020 1 like Share More Similar opinion. Write a review on ProductReview.com.au ! CLS AU Im very disappointed as I expected it to be handy when in emergency but instead it gave me great headache when my little one had high fever and even bigger disappointment. I just want a thermoscan that works. I do feel like Ive been scammed as it costs us so much money and never worked once and to just throw it away is such a waste for the planet. Like Share More 1 comment Customer Service Braun 4 years ago Hi CLS, sorry to hear about your disappointing experience. Read more lacement if its within warranty 2 years. Returns are actually very low on the ThermoScan if yours isnt working well be happy to help you sort it out. Freecall 1800 655 841 during business hours. Like Report Similar opinion. Register a free business account Amazon calculates a product's star ratings based on a machine learned model instead of a raw data average. The model takes into account factors including the age of a rating, whether the ratings are from verified purchasers, and factors that establish reviewer trustworthiness. Please try again later. Clarijoh 5.0 out of 5 stars Unlike previous reviewers I found that it does allow an easy change from Celsius to Fahrenheit. The process is described in the manual and takes about 3 seconds.I have found it to be very accurate and would recommend it as an item for all households. I received one as a gift many years ago and recently purchased several to give to other family members.Very accurateI have now bought this twice because of the first package looking like it had been opened and used I asked for a replacement. This is pictures of the second box. This is for a shower gift it's embarrassing because it looks like I'm giving a used gift!!!! I also don't like that there is no customer service for me to contact anyone!This is perfect. Only takes an instant to check him. I highly recommend this thermometer.This is simple. Easy to work. And comes with ear covers for future sick kids!

Wir hatten zunachst noch zwei NoName Produkte ausprobiert, da hatte man die Temperatur jedoch

genauso auch gleich auswurfeln können. Bewertung Positiv die Temperaturmessung ist unserer Meinung nach korrekt, sie waren reproduzierbar und wir haben mit einem herkömmlichen Fieberthermometer rektal verglichen sicherlich waren nicht immer beide Ohren gleich, das hängt auch von der Schlafposition ab. Das Thermometer ist schnell einsatzbereit. Es hat einen richtigen Ausschaltknopf im Gegensatz zum 3er. Es hat nicht das nervige Einstellungs-menu, das nach jedem Einschaltvorgang kommt, das das 7er hat. Das Thermometer wird mit herkömmlichen AA-Batterien betrieben, nicht wie das 3er mit Knopfzellen Akkus habe ich noch nicht getestet, mache ich aber noch und gebe hier an, ob es funktioniert Negativ. Ich hatte natürlich den ein oder anderen Verbesserungsvorschlag an die Firma Braun, jedoch schätze ich, dass hier kein Mitarbeiter nach Tipps zur Verbesserung der Geräte suchen wird;. Eine Bitte hatte ich, falls Sie die Rezension nicht hilfreich fanden, und sie schlecht bewerten, dann geben Sie mir bitte einen Tipp in Form eines Kommentars, was ich verbessern konnte. Ich gebe mir Mühe, meine Rezensionen möglichst hilfreich und informativ zu gestalten. Besten Dank. Sorry, we failed to record your vote. Please try again We have found it better than others we have bought. I would recommend it anytime. Sorry, we failed to record your vote. Please try again Sorry, we failed to record your vote. Please try again Most of the time it showed high temperature. Discussed with doctor and he advised to use a glass thermometer. Had compared many times and same was the result. All the treatment we had been doing was based on the higher side. Although convenient to use for children but does not show the true picture as compared to analogue. Do not trust it anymore and reply on the manual now. Not sure if all brands are the same but this one is not recommended. Sorry, we failed to record your vote.

Please try again Expensive yes but when you have to take your temp everyday and the accuracy needs to be on the spot as you are a Transplant Patient like myself why use anything else. Basically if for any reason medically you need to keep a close eye on your own or anyone else's temp this has to be the one. For me worth every penny. Very easy to use, press the power button gently hold it in your ear while holding down the measure button wait for the soft confirmation beep and read the digital display. When you switch on the next time it displays the last recorded reading which can be helpful to allow comparisons to be made. It comes with a small pack of probe protectors which can be used to help reduce the spread of germs if you use it on multiple individuals. It's easy to get supplies of the probe protectors. I also purchased a nice carry case which takes a small box of probe protectors as well as the thermometer as if I go away I need to take it with me. A big thumbs up on this one from me. Sorry, we failed to record your vote. Please try again Seul le thermometre rectal est vraiment fiable. Pas pratique mais exact. Donc je met 5 etoiles pour le produit qui me convient bien en pratique pour un usage professionnel. Et je vous invite a FUIR les modeles frontaux, c'est totalement obsolete. Sorry, we failed to record your vote. Please try again Ich habe mehrmals hintereinander gemessen und zum groten Teil immer die gleiche Messung erhalten sehr selten einen anderen wert und der lag bei maximal 0.3 grad Unterschied. Das finde ich akzeptabel, die rektale Methode ist zwar im Gegensatz dazu wesentlich genauer, wird hier aber lauthals bestreikt. Von daher kann ich darüber entspannt hinweg sehen. Zum Vergleich hatte ich mal ein Stirnthermometer, damit dürfen die Kinder jetzt ihren Arztkoffer schmücken. Sorry, we failed to record your vote. Please try again Die Wahl fiel auf den Thermoscan 5 und wir sind absolut unzufrieden. Messungen sind total ungenau.

Haben bei 3 verschiedenen Personen, die nachweislich kein Fieber haben, gemessen. Wir hatten hier um die 36,6. Für uns ist der Thermoscan 5 das schlechteste Fieberthermometer welches wir je besessen haben. daher keine Kaufempfehlung. Sorry, we failed to record your vote. Please try again Measured 36.9 degrees in left ear and 38.3 in right ear 30 seconds later. Yes, it was the same person, before you ask. The higher reading was much more believable, but still wrong as correct temp taken using an underthetongue thermometer immediately afterwards was 39.5 degrees. Same problem encountered repeatedly. Ended up not trusting any subsequent readings and double checking them all. The only consistent feature of this device has been its inconsistency. I believe it

relies on the detection of infrared radiation from the tympanic membrane which it then turns into a temperature reading, but there are so many possible sources of error with this. Perhaps I bought the only faulty one ever made, but I doubt it. Based solely on the physics of the available devices, a thermistor bead under the tongue with a typical response time of Sorry, we failed to record your vote. Please try again It literally takes a second or two to tell you the temperature we were using an under the arm thermometer prior to this, but when my son was really ill, he didnt want me lifting his clothes, arms or anything, and it became nigh impossible to take his temperature. So when the new one arrived and I tried it out it was such a joy to not have to disturb him when taking his temperature. Nonobtrusive and super fast just what you need with a sick child. If buying I wouldnt bother ordering extra covers as it comes with quite a few already, so just buy this and order replacements as and when you need them. Sorry, we failed to record your vote. Please try again This unit was priced well, and actually I think there are advantages compared to the more expensive 7 series.

Its small, appears accurate and is easy to use. It has a plastic cap which means it can be kept hygienically in a drawer, and comes with a small supply of plastic caps which are cheap to replace. In terms of whether its worth paying extra for the 7 basically the differences are This one comes with a plastic cap for protecting the sensor, youll need to keep the plastic caps separately. Thats a potentially neater, but bigger, solution. The 5 simply takes a temperature the 7 requires you to set the right age range each time before using. Thats a bit of a nuisance so if you dont have infants below 36 months I think that the 5 is actually less hassle to use. The 7 has a backlight on the display, which makes it slightly easier to read. The backlight changes colour for the temperature red, amber, green to help interpretation. This is just an LCD display but personally I dont think this is a showstopper. Im very happy with this purchase. Sorry, we failed to record your vote. Please try again Ab und zu auch die Eltern, man wird ja auch mal krank. Die Messergebnisse sind erstaunlich genau, wenn man korrekt misst. Das heit, das Thermometer mit dem Aufsatz richtig ins Ohr reinsteckt und dann misst. Damit kann man leben, zumal das Messen im Ohr fur alle Beteiligten sehr viel weniger Aufwand und Stress mit sich bringt. Wenn das Kind sind anfangs scheut, kann man ihm gut das Themometer mal selbst in die Hand geben. Dann darf es drucken und auch mal bei Papa und Mama messen. Danach war es zumindest bei uns kein Problem mehr, beim Kind zu messen. Von unserer Sicht als zweifache Eltern fast schon ein Muss in der Hausapotheke! Sorry, we failed to record your vote. Please try again This has caused a lot of worry and wasted a lot of mine and my doctors time. I can't seem to find a contact number. Sorry, we failed to record your vote. Please try again Das ist fur mich kein zuverlassiges Thermometer und vor allem nicht zur Messung von Fieber.

Wollte heute wieder eine Testmessung durchfuhren aber das Thermometer lasst sich nicht einschalten, der Batterieaustausch brachte auch nichts. Versuche nun das Thermometer zu reklamieren, obwohl in der Bestellhistorie steht, dass die Rucksendung nicht moglich ist. Sorry, we failed to record your vote. Please try again The hospital thermometer read a normal 37.6 then still this one read 39.0. Sorry, we failed to record your vote. Please try again Page 1 of 1 Start over Page 1 of 1 In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. The shape of the thermometer probe prevents it from being inserted too far into the ear canal, which can hurt the eardrum. However, as with any thermometer, proper technique is critical to obtaining accurate temperatures. Therefore, read the instructions carefully and thoroughly. The Braun ThermoScan thermometer is indicated for intermittent measurement and monitoring of human body temperature for people of all ages. It is intended for household use only. Use of IRT 6520 along with Age Precision™ feature is not intended as a substitute for consultation with your physician. Braun Thermometers Fan Page Website Correct it, if wrong. The ExacTemp guidance system confirms the stable position of the device and an accurate reading with a light and a beep.
